

JOHN WEBB
Web Developer

BIOGRAPHY

Full stack developer with a dedication to how the world ought to be – a solution for every problem, no limits on creative opportunities, and the good guys always win.

The world outside is not like that. Therefore I code.

I'm a determined problem solver. Quality matters to me – the quality of my code, of my interactions with my team, and the quality of experience for the end user. I work hard to generate consistent superior results. I believe in creating solutions, no matter what.

In my downtime I enjoy collecting and reading books on the latest best practices, searching for great deals on used equipment for my garage gym, strength training, photography, and hanging out with my wife and my dog.
